

Lab: Assemble Your Product Backlog Using GitHub

Estimated time needed: 20 minutes

In this lab, you will create seven user stories based on the requirements given. The first four will be given to you. You only have to cut and paste them to get familiar with creating user stories in Github. You will have to create the last three user stories yourself. You will then prioritize these stories and move them into appropriate columns on your Kanban board.

Objectives

After completing this lab, you will be able to:

1. Create new user stories using GitHub issues.
 2. Prioritize the product backlog.
-

Exercise 1: Create new user stories using GitHub issues

In this exercise, you will create the following user stories using GitHub issues:

Stories from the lesson:

Title: Need a service that has a counter

- As a user, I need a service that has a counter so that I can keep track of how many times something has been done.

Title: Must allow multiple counters

- As a user, I need to have multiple counters so that I can keep track of several counts at once.

Title: Must persist counter across restarts

- As a service provider, I need the service to persist the last known count so that users don't lose track of their counts after the service is restarted.

Title: Counters can be reset

- As a system administrator, I need the ability to reset the counter so that I can redo counting from the start.

New requirements:

- Deploy service to the cloud
- Need the ability to remove a counter
- Need the ability to update a counter to a new value

Prerequisite:

Please ensure that you have created the Issue template. If the template hasn't been created yet, kindly complete this lab [Hands-on-lab: Create an issue template in GitHub](#).

1. Go to the Issues tab of lab-agile-planning repository.

The screenshot shows the GitHub interface for the repository 'lab-agile-planning' owned by 'RajshriSkillup'. The repository is public. The top navigation bar includes links for Code, Issues (highlighted with a red box and showing 1 issue), Pull requests, Actions, Projects, Wiki, Security, and Insights. Below the navigation bar, the repository name 'lab-agile-planning' is displayed with a 'Public' badge. A summary bar shows 'main' branch, '1 Branch', and '0 Tags'. A search bar 'Go to file' is present. The commit history shows two entries: 'Update issue templates' by 'RajshriSkillup' (1a98f) and 'Initial commit' for 'README.md'. The 'README' tab is selected, showing the repository name 'lab-agile-planning' in a large font.

2. Click on the New issue button.

Filters

Welcome to issues

Issues are used to track todos, bugs, feature requests, and more. They appear here in a searchable and filterable list. To get started, click on the [New issue](#) button.

ProTip! Notify someone on an issue with a mention.

© 2024 GitHub, Inc. [Terms](#) [Privacy](#) [Security](#) [Status](#) [Docs](#) [Contact](#)

3. You'll see your template listed here. Click on the User Story arrow.

5. Your first user story is now created and should resemble the screenshot shown below.

The screenshot shows a GitHub interface for a repository named 'RajshriSkillup / lab-agile-planning'. The top navigation bar includes links for Code, Issues (1), Pull requests, Actions, Projects, Wiki, Security, and Insights. The main heading is 'Need a service that has a counter #1', with a green 'Open' button and the text 'RajshriSkillup opened this issue now · 0 comments'. Below this, a comment by 'RajshriSkillup' is displayed, containing a user story template:

**As a User,**  
I **need** a service that has a counter,  
So that I can keep track of how many times something was done.

**Details and Assumptions**

- [document what you know]

**Acceptance Criteria**

```
Given [some context]
When [certain action is taken]
Then [the outcome of action is observed]
```

6. To add the created user story to the Kanban board, click the settings button next to the Projects option, and then choose the Lab Agile Planning project from the dropdown that you created in the [Hands-on Lab: Get Set Up in GitHub](#).

 RajshriSkillup / lab-agile-planning

RajshriSkillup added this to Lab Agile Planning 2 minutes ago

8. To view the newly created user story on the Kanban board, navigate to the Projects tab and select the project titled Lab Agile Planning.

The screenshot shows the GitHub interface for the repository 'lab-agile-planning' by user 'RajshriSkillup'. The top navigation bar includes links for Code, Issues (1), Pull requests, Actions, Projects (1), Wiki, Security, and Insights. The 'Projects' link is highlighted with a red box. Below the navigation bar, a search bar contains the text 'is:open'. A summary bar indicates '1 Open' and '0 Closed' projects. Below this, a project card for 'Lab Agile Planning' is shown, with a 'Private' label and a red box around it. The card also shows a status of '1/5 updated 1 minute ago'.

9. You'll notice that the newly created user story is now listed under the **New issues** column.

10. Since we have to create a total of seven user stories, let's adjust the default limit to 7. To achieve this, click the three dots from the **New Issues** column, then select the **Set limit** option.

11. Enter the limit as 7 in the **Column limit** text field and click save.

The screenshot displays the 'Lab Agile Planning' interface. At the top, there's a navigation bar with a menu icon, a GitHub logo, and the text 'RajshriSkillup / Projects / Lab Agile Planning'. Below this, the title 'Lab Agile Planning' is followed by a series of tabs: 'Backlog', 'Priority board', 'Team items', 'Roadmap', 'In review', 'My items', and a '+ New view' button. A filter bar below the tabs says 'Filter by keyword or by field'. The main area contains three columns: 'New issues' (1/5 items, Estimate: 0), 'Icebox' (0 items, Estimate: 0), and 'Product Backlog' (0/3 items). The 'New issues' column has one item: 'lab-agile-planning #1' with the description 'Need a service that has a counter'. Each column has an 'Add item' button at the bottom. A modal titled 'Edit column limit' is open over the 'Icebox' column. It has a 'Column limit' label and a text input field containing the number '7', which is highlighted by a red rectangular box. Below the input field, it says 'A limit on the number of items in a column'. A 'Cancel' button is at the bottom right of the modal.

Please note that, similar to this, you can choose to modify the limits of other columns or keep the default limits.

12. To return to the 'Issues' tab for creating new user stories, simply click on the browser's back button.

The screenshot shows a web browser window with the address bar displaying 'github.com/users/RajshriSkillup/projects/4/views/1'. The page title is 'Lab Agile Planning'. Below the title, there are tabs for 'Backlog', 'Priority board', 'Team items', 'Roadmap', 'In review', 'My items', and a '+ New view' button. A filter bar says 'Filter by keyword or by field'. The main content area is a Kanban board with three columns:

- New issues** (1 / 7, Estimate: 0): Contains one item, 'lab-agile-planning #1', with the description 'Need a service that has a counter'.
- Icebox** (0, Estimate: 0): Empty.
- Product Backlog** (0 / 3): Empty.

Each column has a '+ Add item' button at the bottom.

13. Continue adding stories until all seven are created and your Kanban board resembles the screenshot shown below. The first four stories are provided in the lesson. You will need to create your own role, function, and benefit for the last three stories.

Exercise 2: Prioritize the product backlog

In this exercise, you will move issues between columns to recreate the Kanban board from the video lesson **Building the Product Backlog**. This will simulate an initial starting point for our next lab on backlog refinement. Please note that you can move the issues between columns by simply dragging and dropping them from one column to the other.

- 1. Move the **Need a service that has a counter** story to the top of the **Product Backlog** column.
- 2. Move the **Must allow multiple counters** story to the **Icebox** column.
- 3. Move the **Must persist counter across restarts** story to the bottom of the **Product Backlog** column.
- 4. Move the **Counters can be reset** story to the bottom of the **Product Backlog** column.
- 5. Leave the remaining stories in the **New Issues** column for now. We will move them in a later lab.

At the completion of this exercise, your Kanban board should look like the one shown below:

## Summary

You learned how to create new stories in GitHub using Issues in GitHub and a User Story template. You also learned how to quickly prioritize your product backlog. You now have enough stories in your repository to start planning with GitHub.
