

Hands-on Lab: Get set up in ZenHub

Estimated time needed: 20 minutes

In this lab, you will prepare for the labs that follow by setting up a free GitHub account and a free ZenHub account.

Objectives

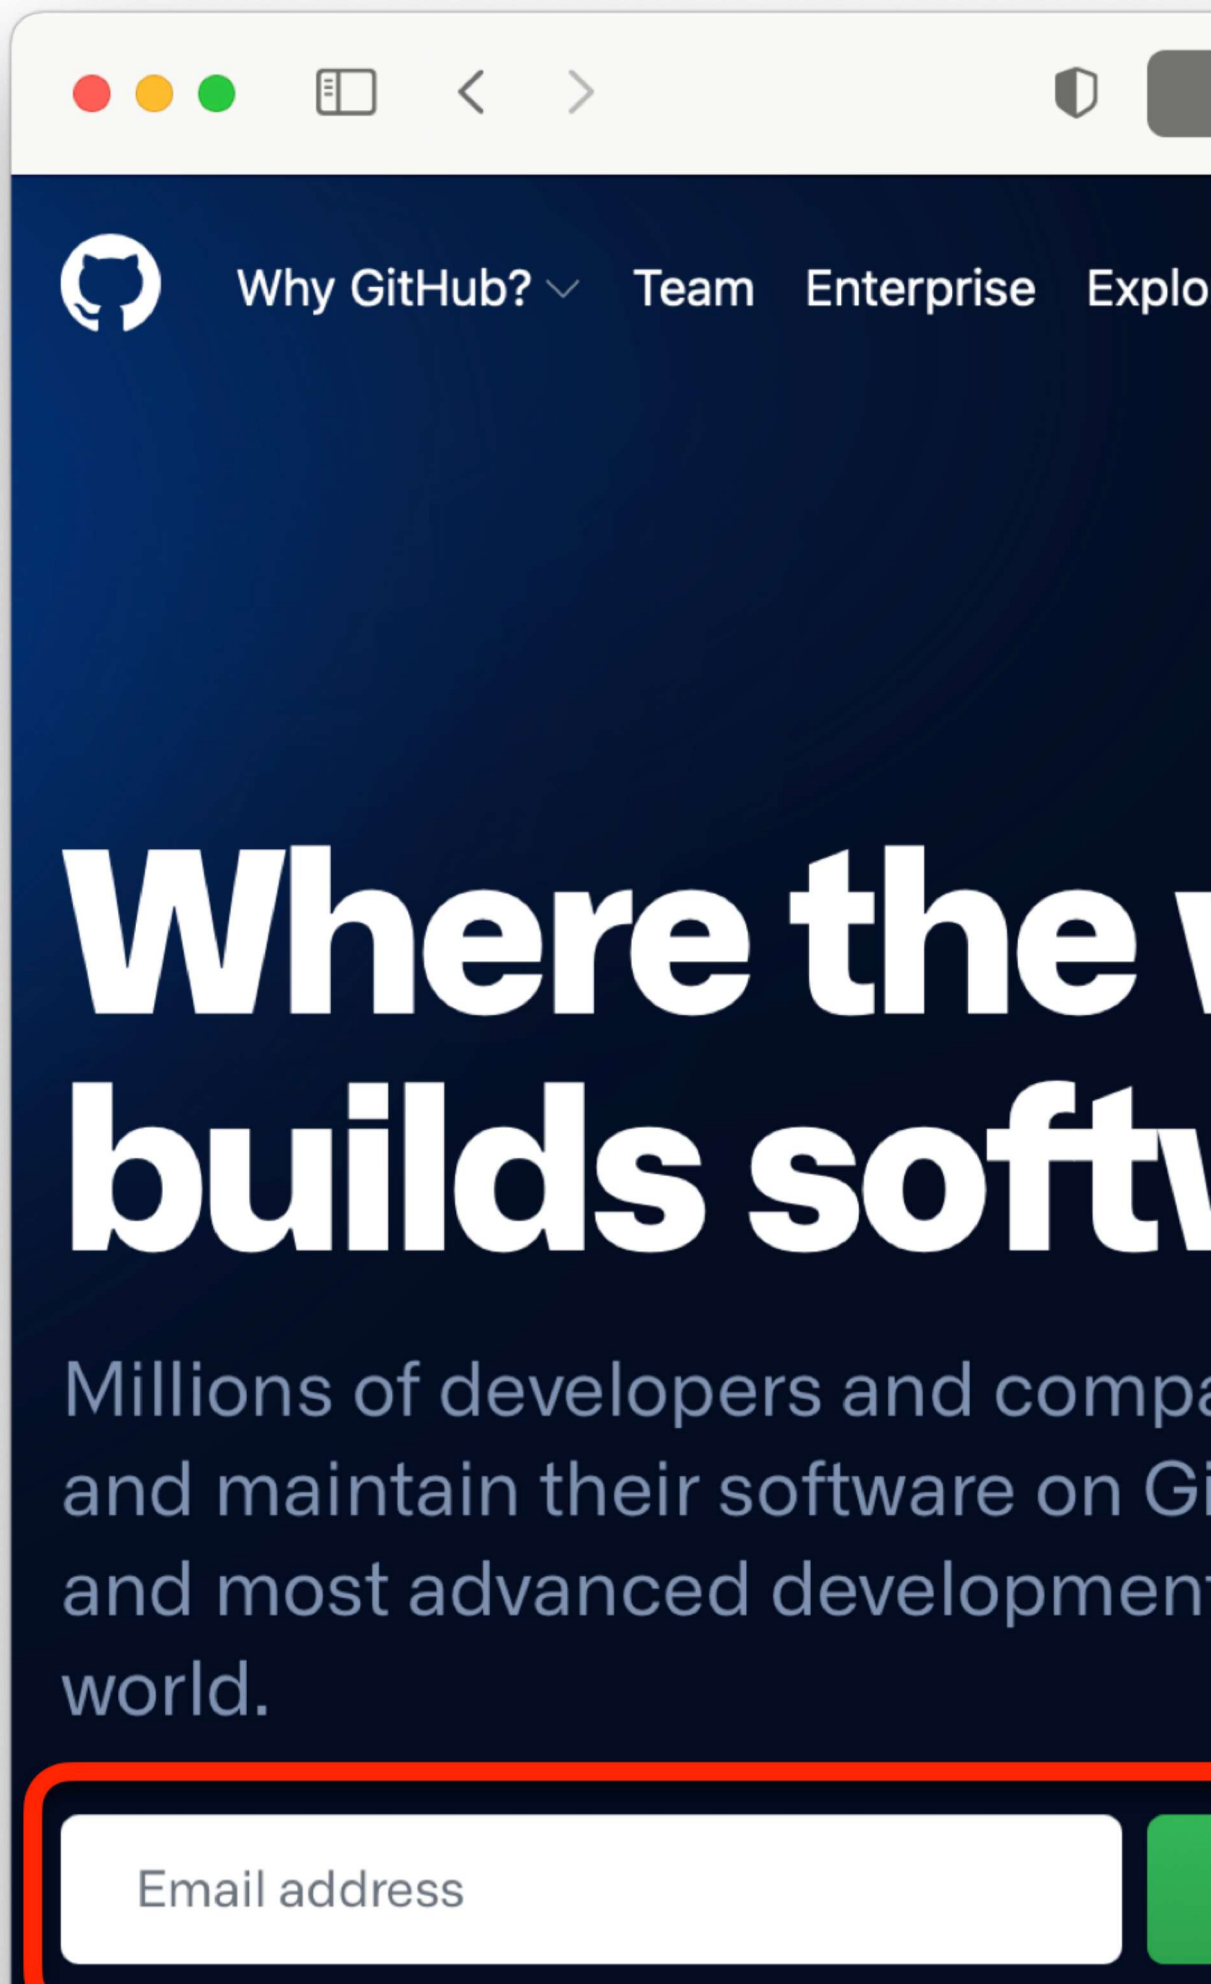

After completing this lab, you will be able to:

1. Create a free GitHub account.
2. Create a GitHub repository.
3. Create a free ZenHub account.
4. Install the optional browser extension for ZenHub.

Exercise 1 : Create a free GitHub account

In this exercise, you will create a free GitHub account, if you don't already have one. ZenHub requires GitHub so this first step is a prerequisite to getting a ZenHub account.

1. Go to [GitHub.com](https://github.com) and sign up for a free GitHub account.
2. Enter your email address and press the **Sign up for GitHub** button. If you have an account, press the **Sign in** button and login.

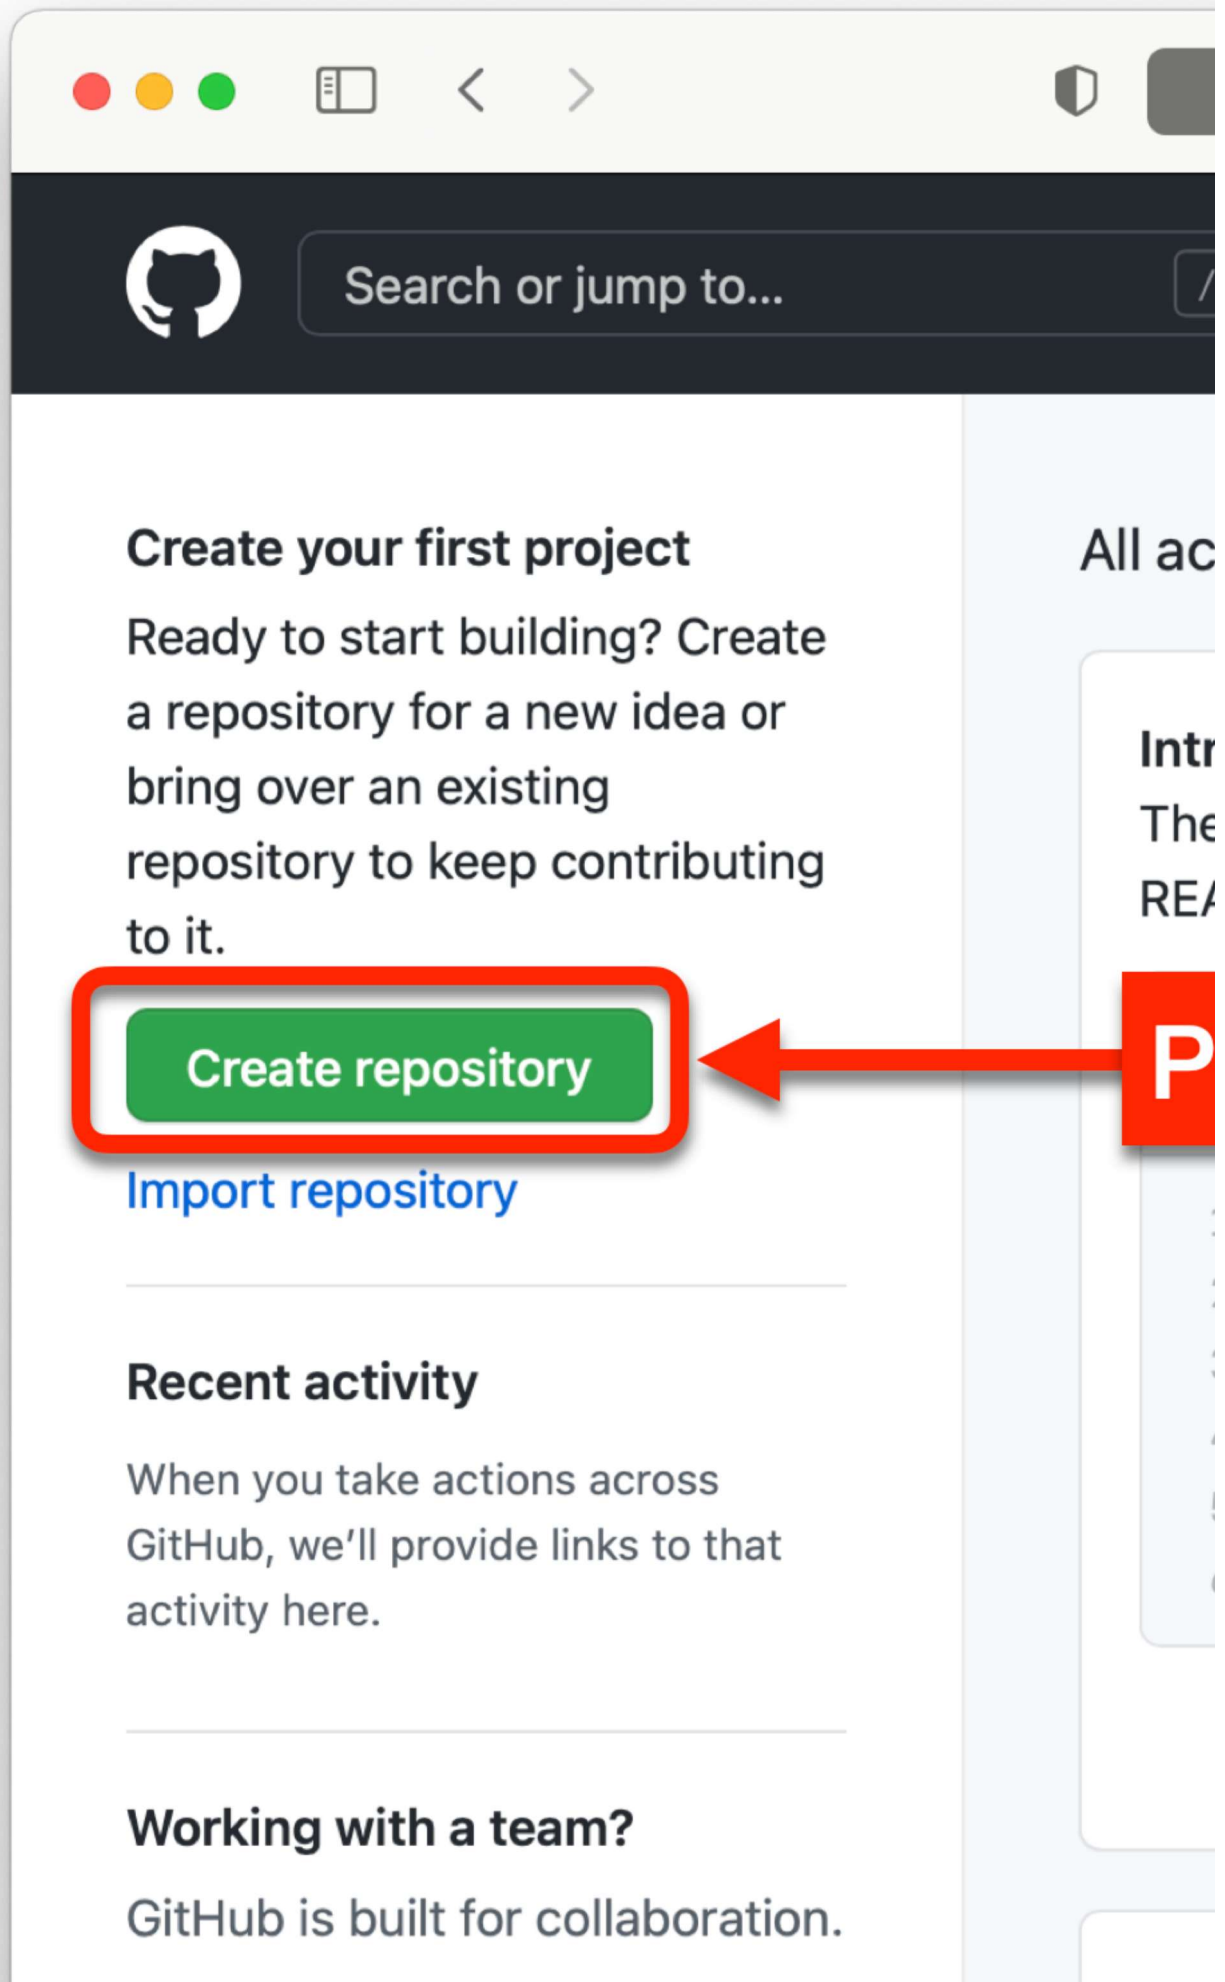

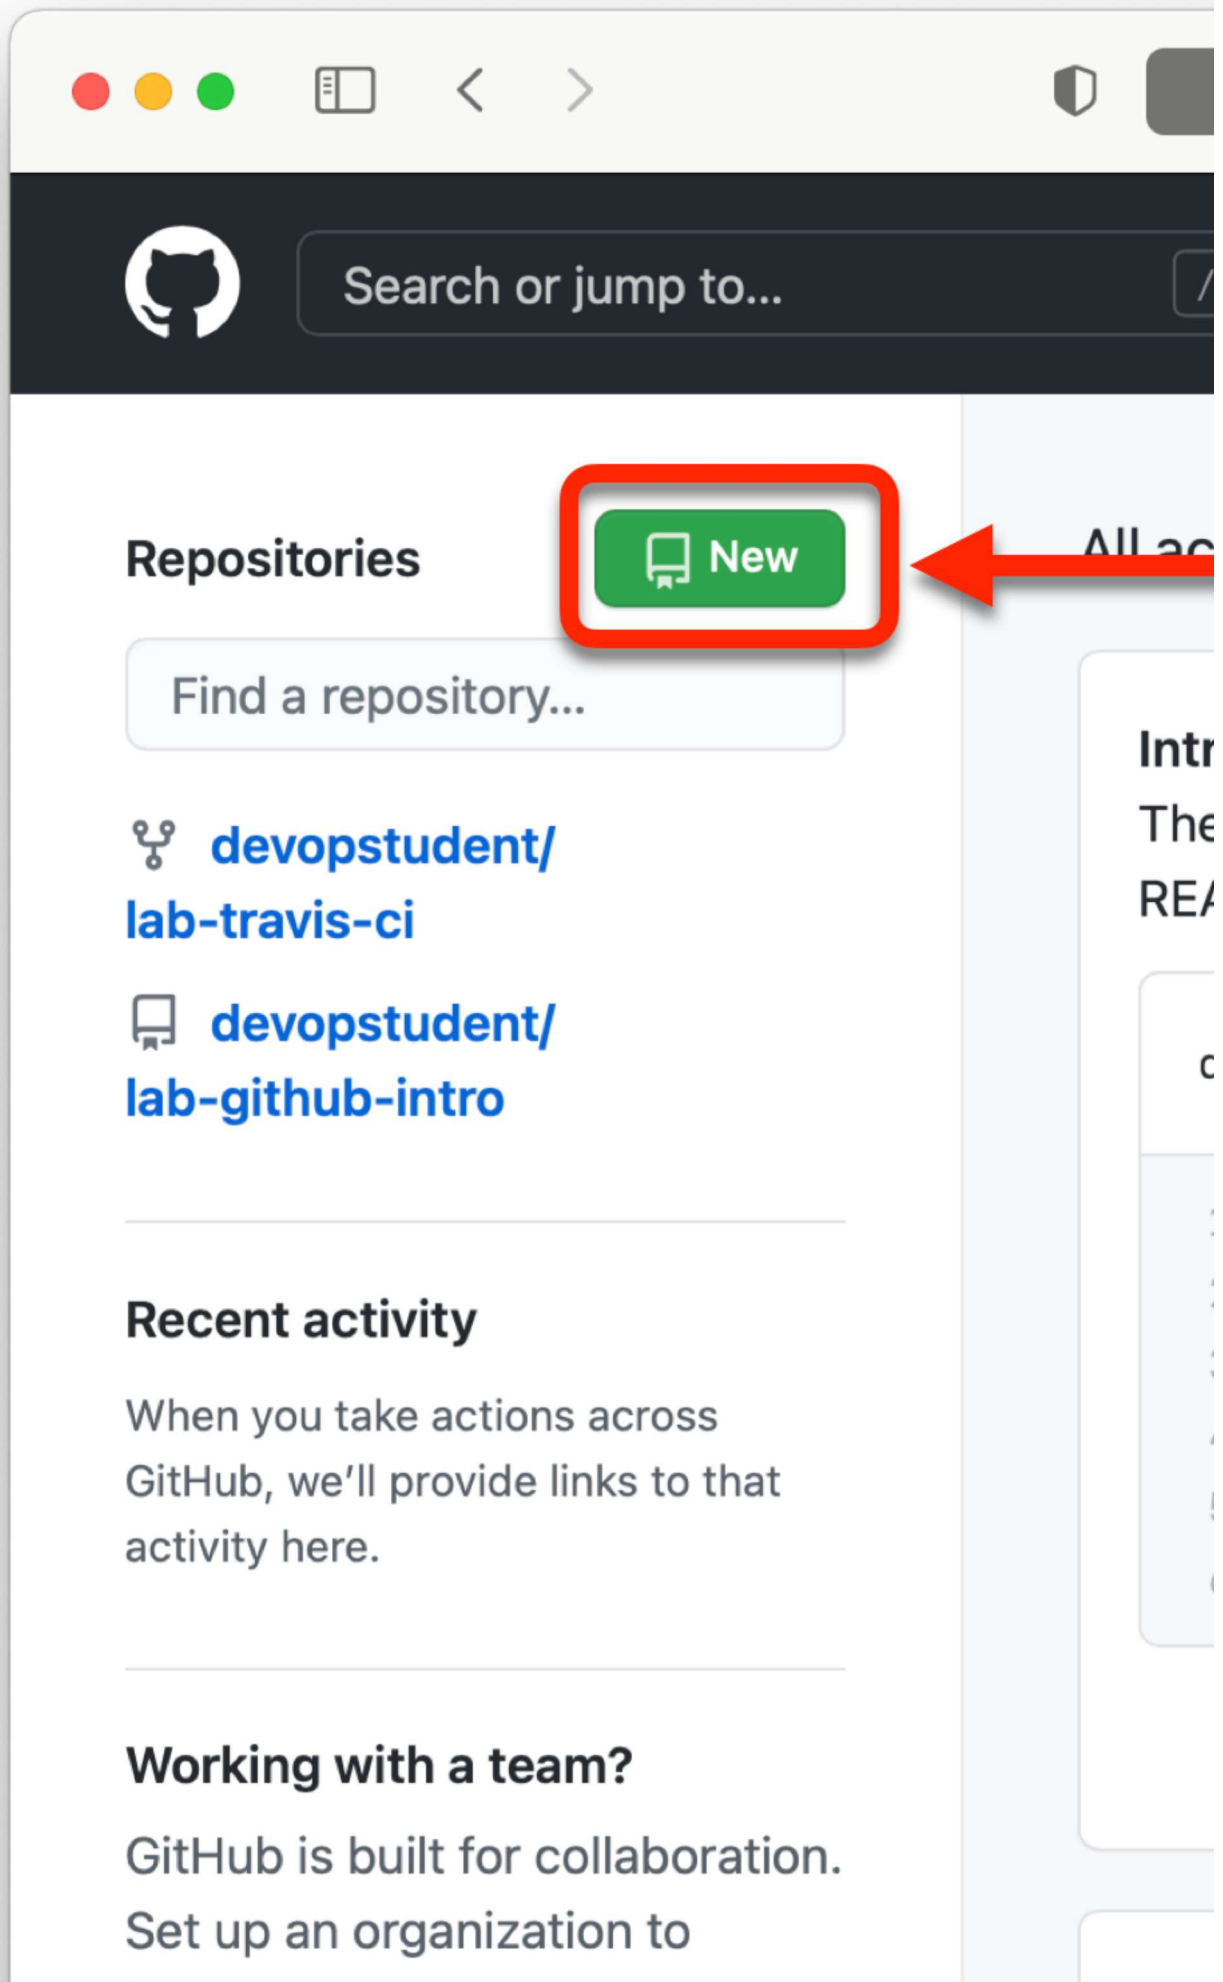

Exercise 2 : Create a GitHub repository

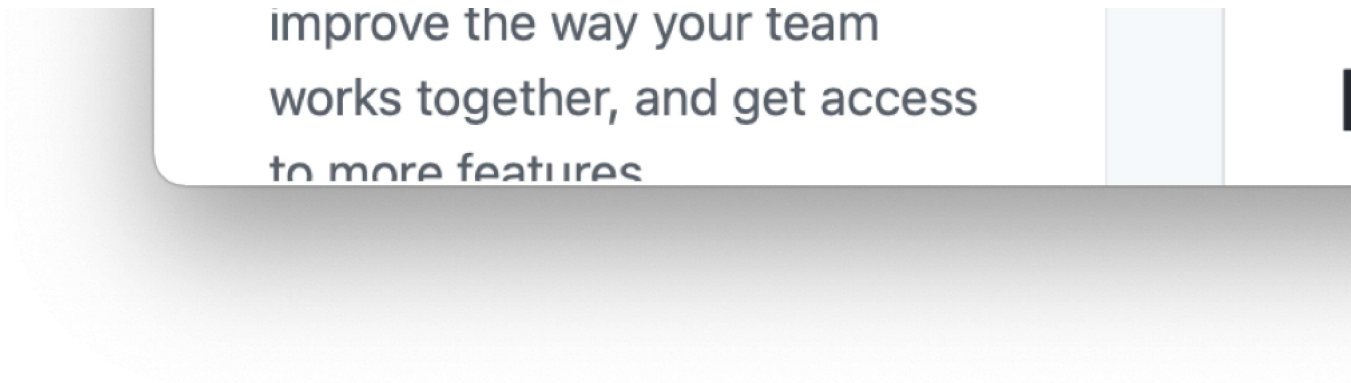

In this exercise, you will create a repository to hold the issues and kanban board for your plan.

1. If you just created your GitHub account, create your first repository by pressing the **Create repository** button, then go to step 3.

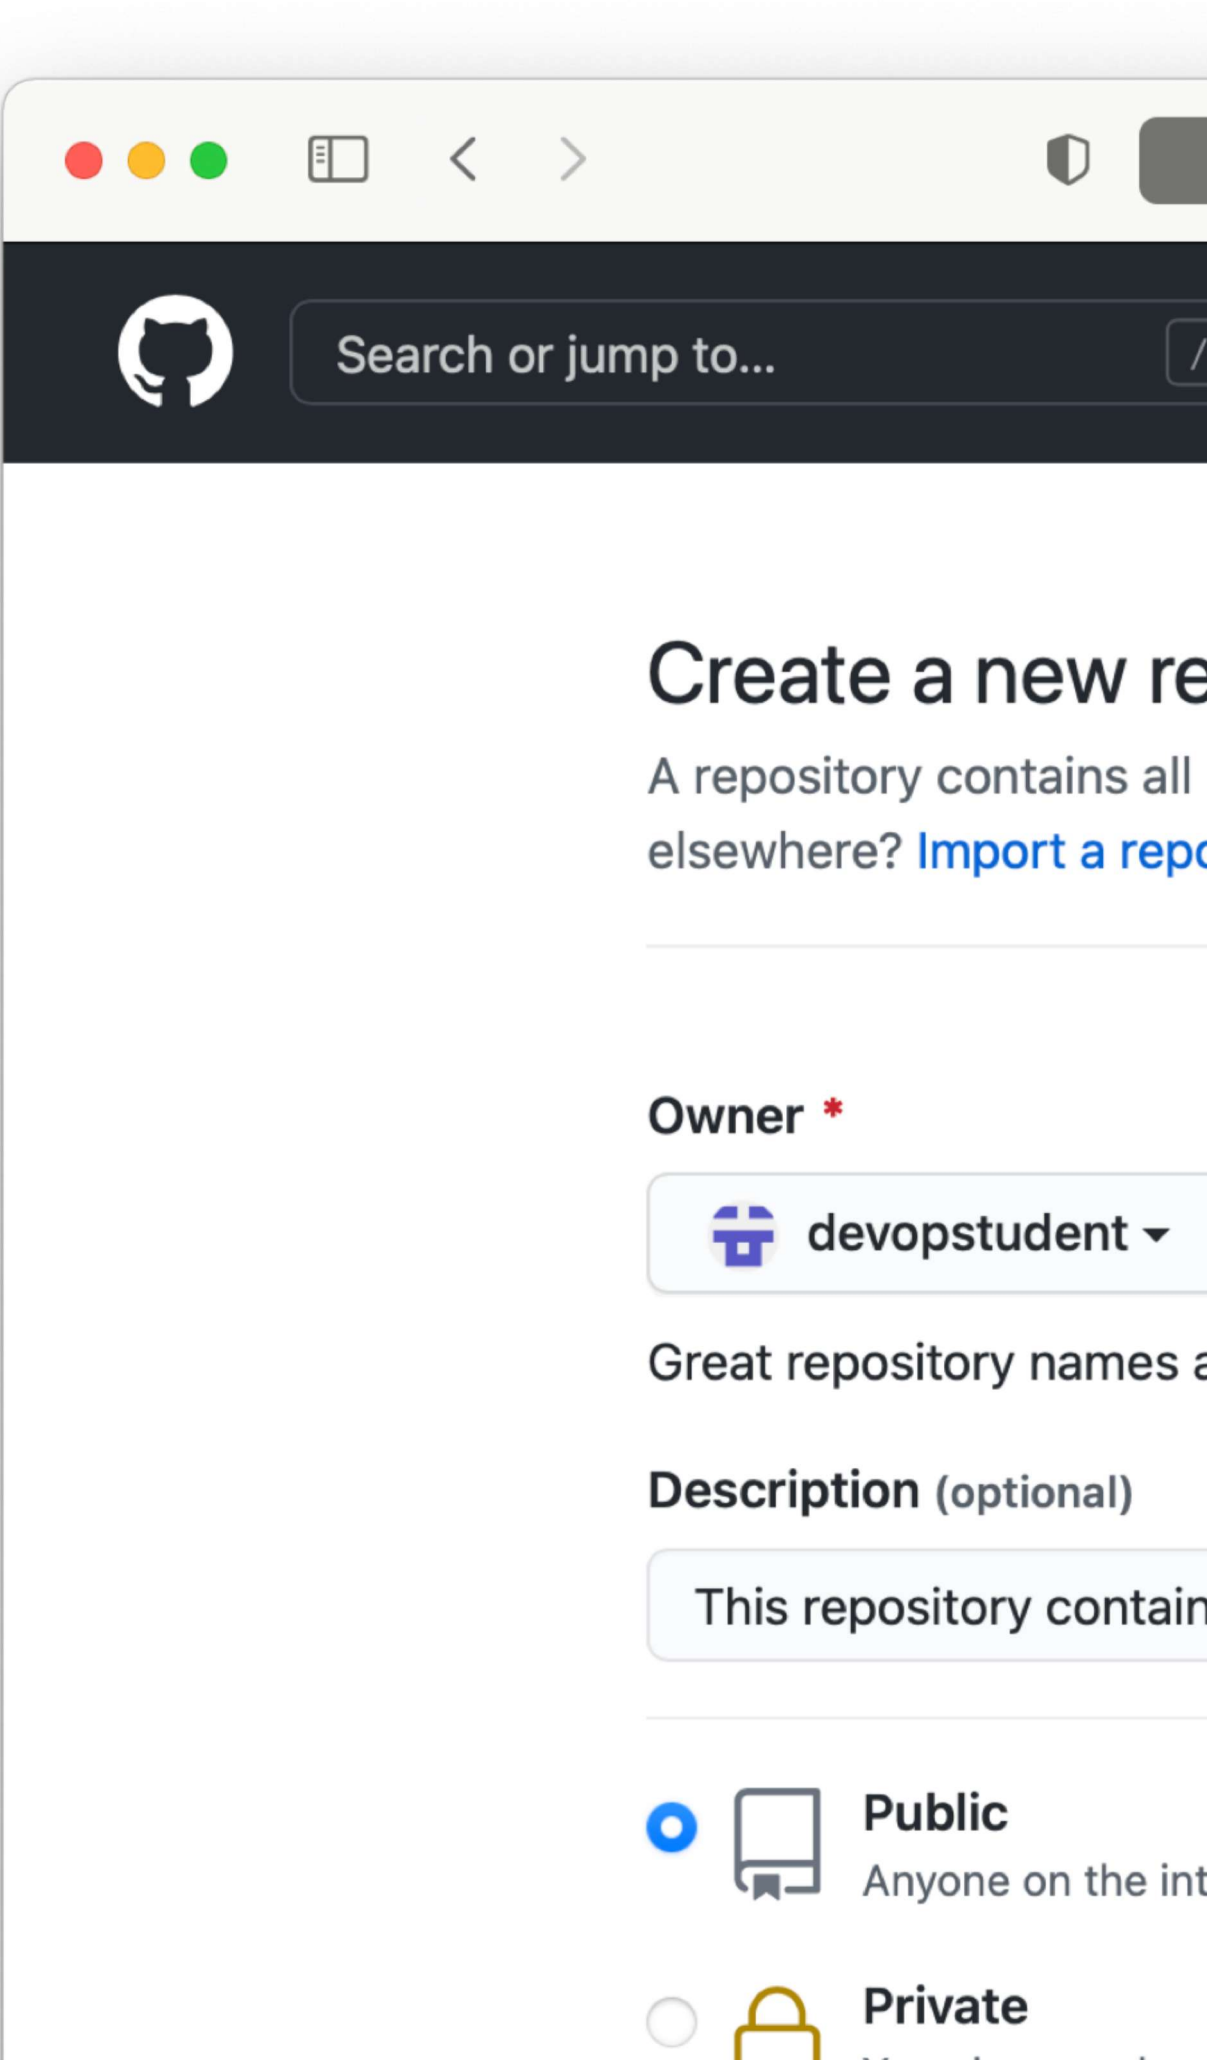

-
2. If you already have a GitHub account, sign into GitHub and on your account page, press the **New repository** button.

improve the way your team
works together, and get access
to more features

3. Name your repository **lab-agile-planning** and give it a good description like: *This repository contains the lab for agile planning* and make sure the **Public** option is selected.

You choose who c

4. Scroll down on that page and select **Add a README file** and then press the **Create repository** button to create the new repository.

>

Description (optional)

This repository contains

☒

Public

Anyone on the internet can view this repository.

☐

Private

You choose who can view this repository.

Initialize this repository

Skip this step if you're importing an existing repository.

☒ Add a README file

This is where you can write the README file.

☐ Add .gitignore

Choose which files not to track.

☐ Choose a license

A license tells others what you allow them to do with your work.

This will set

 master

a

Create repository

You should now have a new repository called **lab-agile-planning** that we will use with ZenHub. It should look similar to the screenshot below:

This repository contains the lab for agile

Exercise 3 : Create free ZenHub account

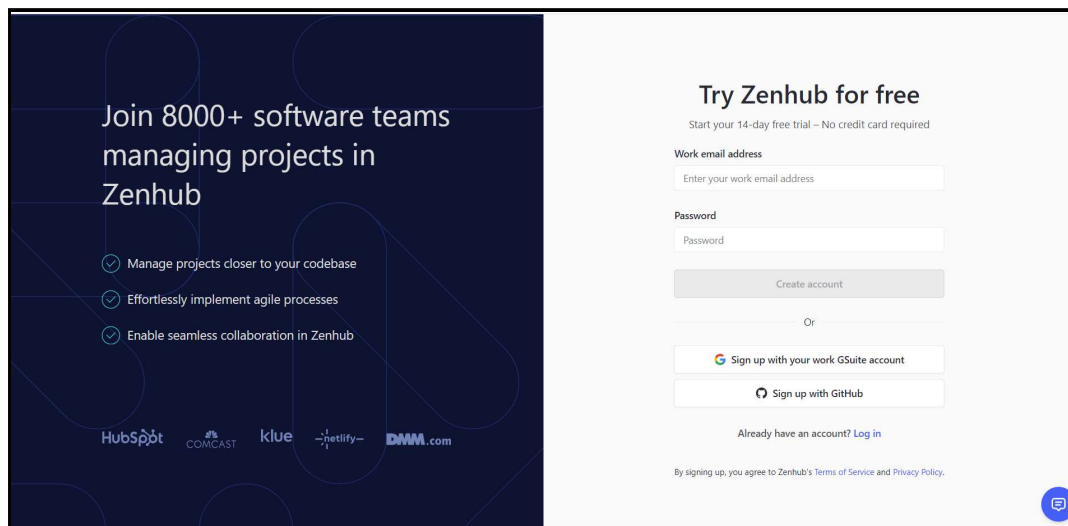

In this exercise, you will create a free ZenHub account to use with GitHub. ZenHub is an application that integrates with GitHub. In order to use it, you must sign up for a free account.

1. Go to www.zenhub.com and press the [Start for free](#) button.

Please note that the validity period for free account is limited for 14 days.

2. On the next page, you need to enter your Email ID and a strong Password to create a new ZenHub account. Then verify your email.

Note: Alternate way, press the **Sign up with Google** button if you have a google account already and want to use that on ZenHub and then login using your Google/Gmail credentials.

3. Enter whatever you want for this ZenHub workspace and press **Continue**

Step 1 of 3

Name your workspace

This is where you will be working on projects with your team.

Workspace name

☐ This workspace is for a student or a course.

Continue

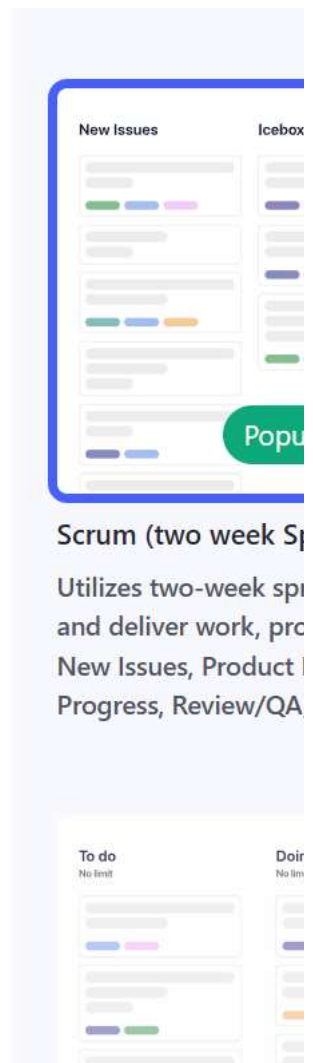

Step 2 of 3

Select a template for your workspace

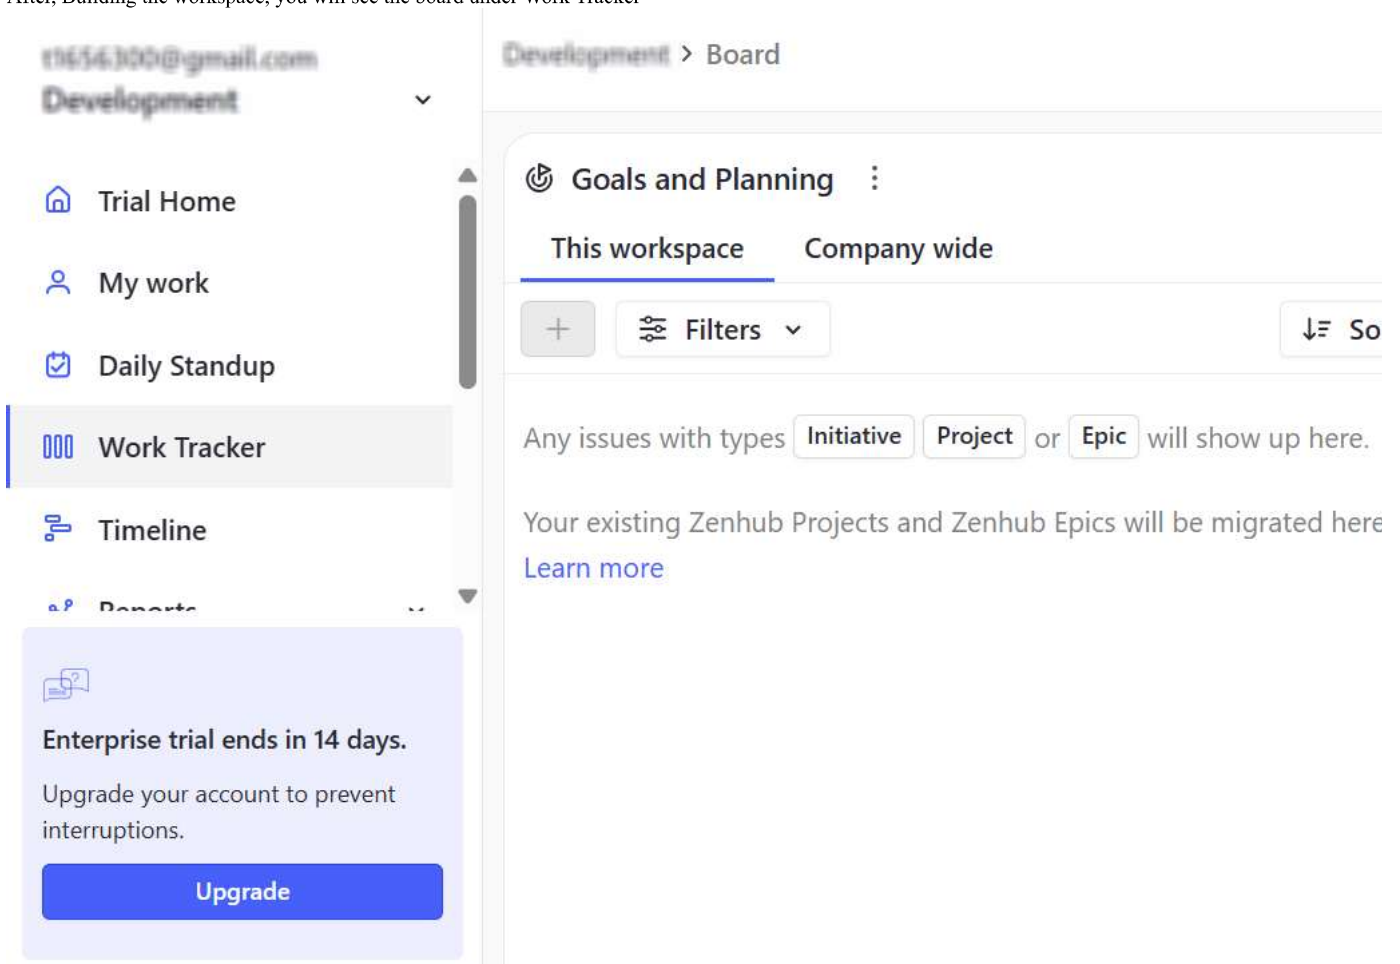

Get started quickly with Zenhub workspace templates. Make changes later as needed.

Continue

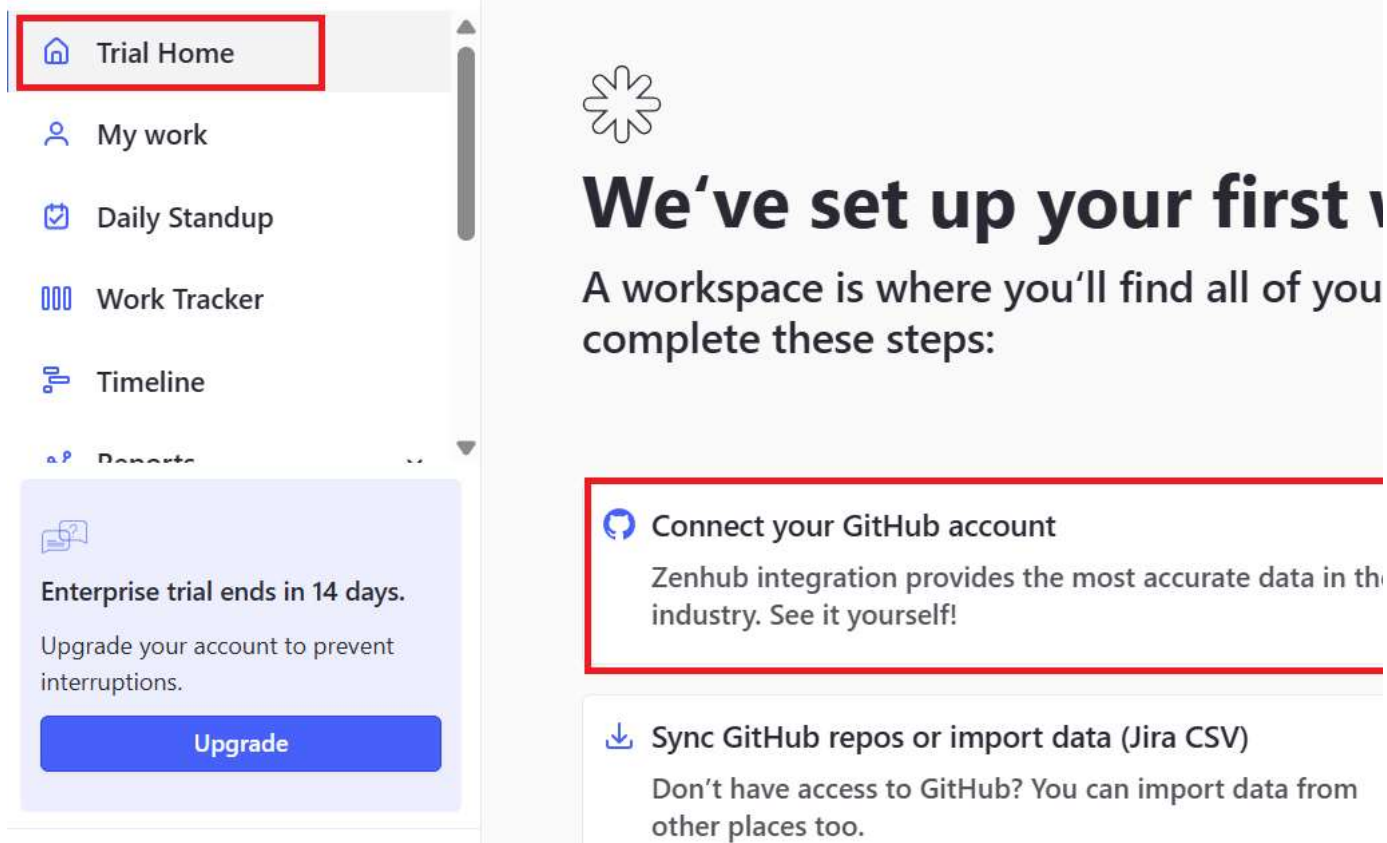

Start without a template

4. After, Building the workspace, you will see the board under Work Tracker

5. To connect the Zenhub account with your GitHub account, Go to **Trial Home** and click on **Connect your Github account**.

We've set up your first workspace
A workspace is where you'll find all of your work. To complete these steps:

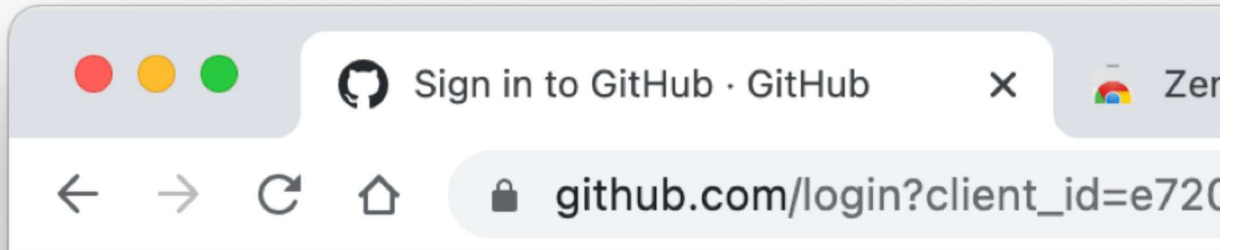

Connect your GitHub account
Zenhub integration provides the most accurate data in the industry. See it yourself!

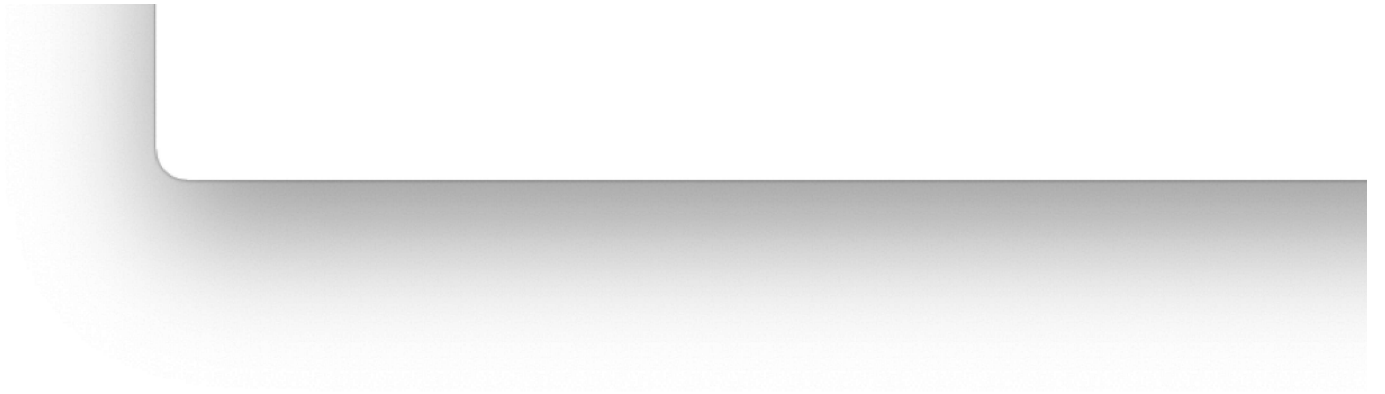

Sync GitHub repos or import data (Jira CSV)
Don't have access to GitHub? You can import data from other places too.

6. Since you are already signed into GitHub from the previous steps, you should be presented with a page that will allow you to authorize ZenHub to access your GitHub account.

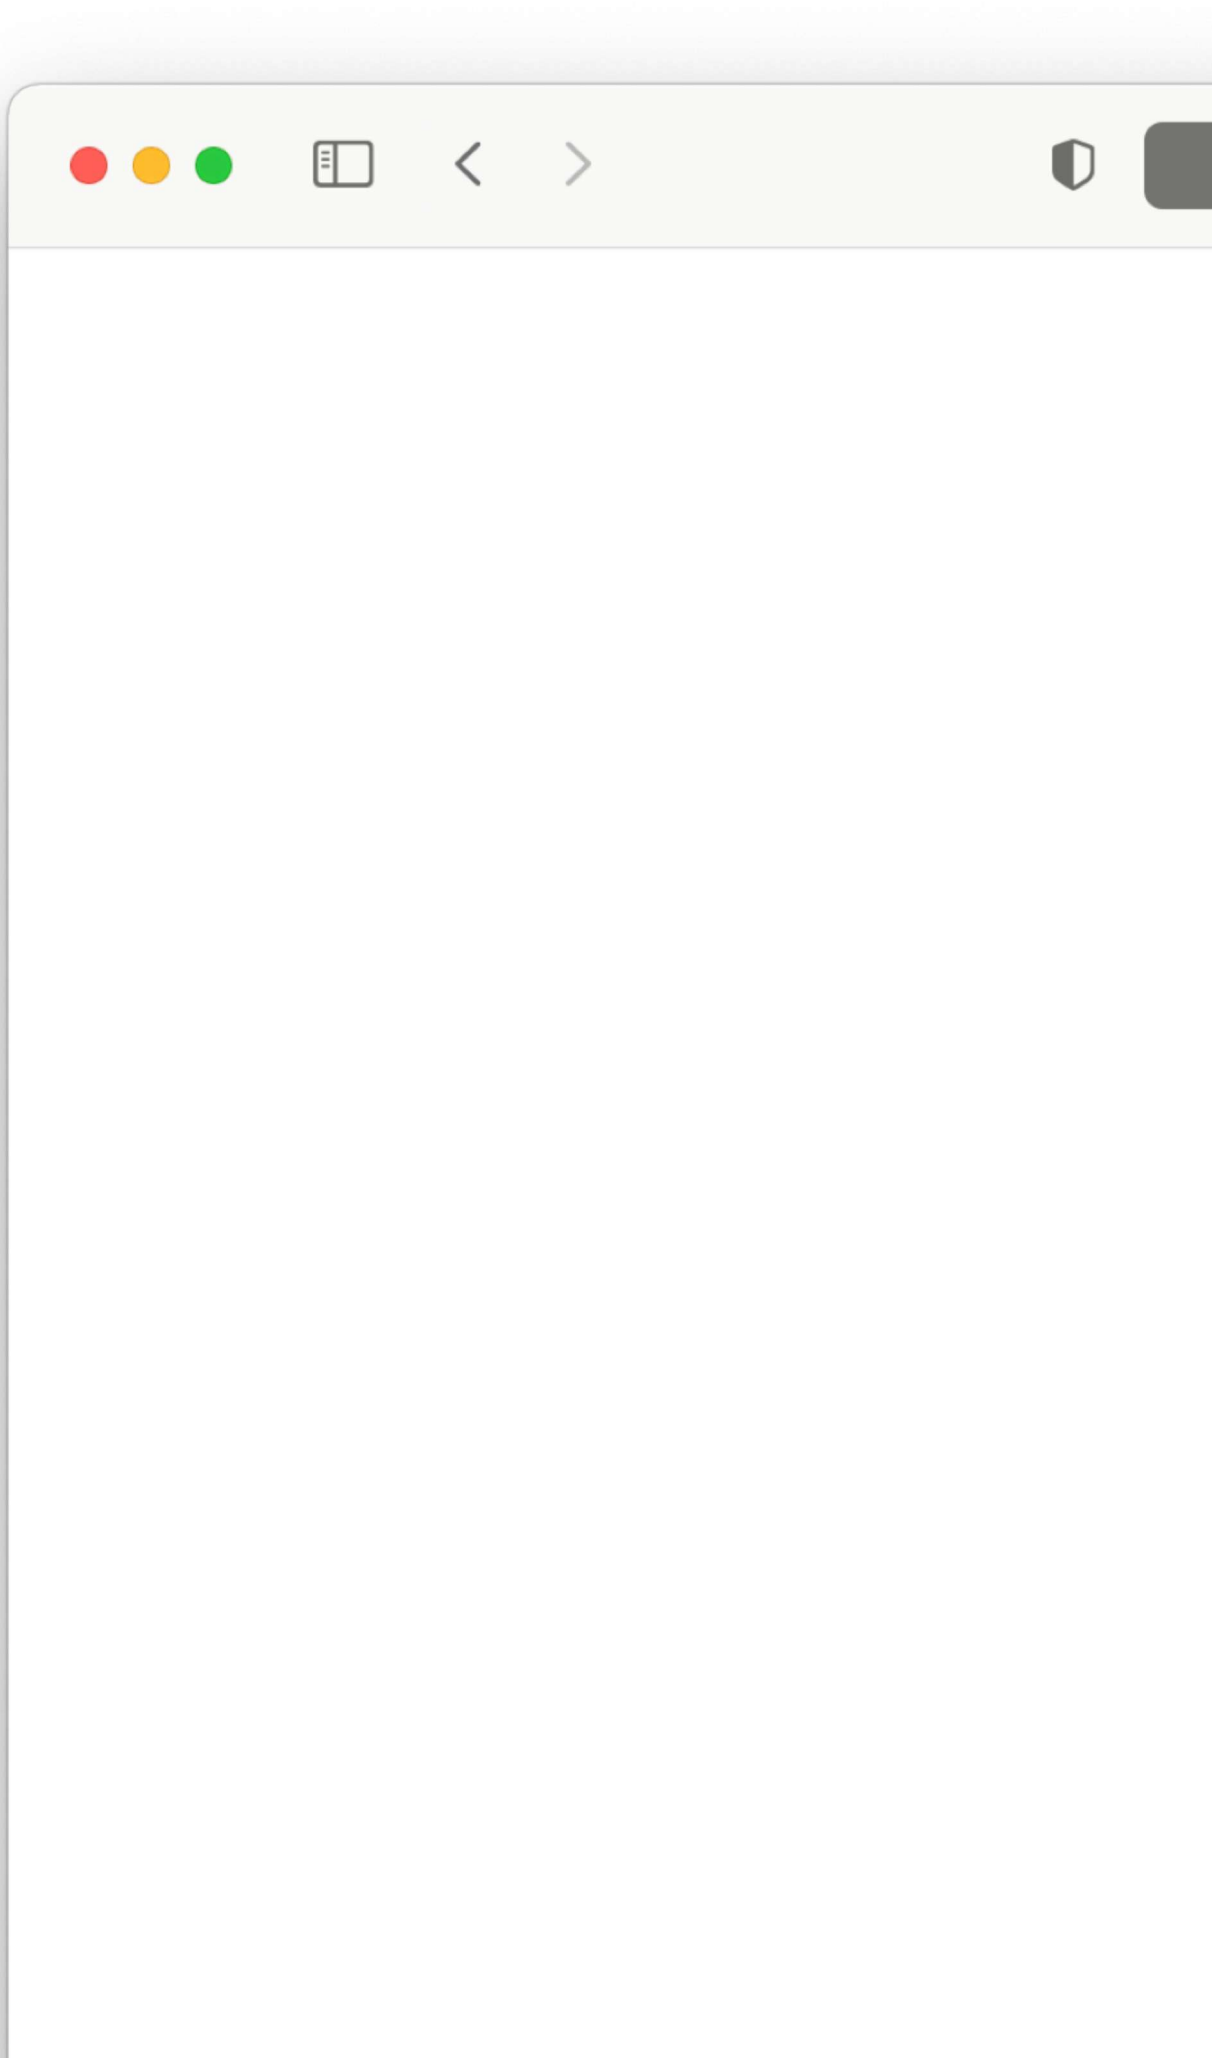

7. If you are not signed into GitHub, you will be prompted to sign in to GitHub. That will bring you to a page where you must use your GitHub credentials. (optional)

8. If you have two-factor authentication enabled on your GitHub account, you must enter your authorization code now.

9. Go to **Trial Home** and click **Sync Github repos or import date (Jira CSV)**

10. Select **Import from Github repositories** and then select the **lab-agile-planning** repository, click **Add**

Import data from GitHub, Jira, or CSV.

You can import data from anywhere. We'll help you setup your account so you can get started right away.

 Import from GitHub Repositories >

 Import from Jira (early access) >

 Import from CSV (early access) >

 Import GitHub Projects (early access) >

Select up to 5 sources at a time

GitHub Repositories

Zenhub Workspaces

Exercise 4 : (Optional) Browser extension for Chrome or Firefox

In this optional exercise, you will download a browser extension for ZenHub.

If you use Chrome or Firefox, you can download a browser extension for ZenHub that will add a ZenHub tab while you are using GitHub so that you don't have to go to zenhub.com to view your kanban board.

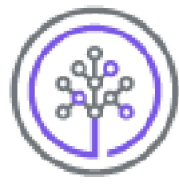

1. Download a browser extension for ZenHub here: www.zenhub.com/extension. Once installed, it will add a ZenHub tab while you are using GitHub. This is purely a convenience. The capabilities of both the browser extension and the web zenhub.com site are the same.

Summary

Congratulations! You are now set up with a ZenHub account and GitHub account so that you can work through the rest of the labs.
