RUSLAN LISOVENKO

has successfully completed the online Specialization

Data Engineering with Open Source Tools

The learner has completed the Data Engineering with Open Source Tools Specialization. Across three courses, the learner developed practical skills in batch, lakehouse, and streaming data engineering using modern open-source technologies. The learner modeled relational data in PostgreSQL; applied SQL joins, CTEs, and window functions; and loaded, validated, and cleaned file-based data. The learner processed data at scale using PySpark and Spark SQL, built layered and tested dbt models, orchestrated batch workflows with Apache Airflow, managed lakehouse data using Apache Iceberg and MinIO, and built Kafka and Spark Structured Streaming pipelines incorporating windowed aggregations, validation, checkpoint-based recovery, and monitoring.
