

Lab: Get Set Up in GitHub

Estimated time needed: 20 minutes

In this lab, you will create a GitHub account and repository which will be required for further labs.

Objectives

After completing this lab, you will be able to:

1. Create a free GitHub account.
2. Create a GitHub repository.
3. Create a Kanban board.

Exercise 1: Create a free GitHub account

In this exercise, you will create a free GitHub account, if you don't already have one.

1. Go to [GitHub.com](https://github.com) and sign up for a free GitHub account.
2. Enter your email address and press the **Sign up for GitHub** button. If you have an account, press the **Sign in** button and login.

3. Enter the required information to create an account as shown below and click '**Continue**'.

Already have an account? [Sign in →](#)

Sign up to GitHub

Email *

Password *

Password should be at least 15 characters OR at least 8 characters including a number and a lowercase letter.

Username *

Username may only contain alphanumeric characters or single hyphens, and cannot begin or end with a hyphen.

Continue >

By creating an account, you agree to the [Terms of Service](#). For more information about GitHub's privacy practices, see the [GitHub Privacy Statement](#). We'll occasionally send you account-related emails.

4. Verify the account according to the option suitable for you.

Already have an account? [Sign in →](#)

Verify your account

Please solve a puzzle so we can safely create your account.

Visual puzzle

 Audio puzzle

5. You may receive a verification email from GitHub. Click the enclosed link to verify your email or enter the provided verification code.

Note: If you do not receive a verification email, click **Resend the code**.

6. After entering the provided verification code, you will see a screen as shown below indicating that you are logged into your account and ready to start using it.

Exercise 2: Create a GitHub repository

In this exercise, you will create a GitHub repository to hold the issues.

1. If you just created your GitHub account, create your first repository by pressing the **Create repository** button, then go to step 3.

2. If you already have a GitHub account, sign into GitHub and on your account page, press the **New** repository button.

improve the way your team
works together, and get access
to more features

3. Name your repository **lab-agile-planning** and give it a good description like: *This repository contains the lab for agile planning* and make sure the **Public** option is selected.

Search or jump to...

 devopstudent ▾

Great repository names

Description (optional)

This repository contains...

☒

Public
Anyone on the internet can see your repository.

☐

Private
Only you can see your repository.

4. Scroll down on that page and select **Add a README file** and then press the **Create repository** button to create the new repository.

The screenshot shows the GitHub repository creation interface. At the top, there's a browser window header with standard macOS window controls (red, yellow, green buttons) and navigation icons (back, forward, and a shield icon). Below this, the 'Description (optional)' section has a text input field containing 'This repository conta'. The 'Visibility' section has two radio button options: 'Public' (selected, with a blue circle icon) and 'Private' (with a yellow lock icon). The 'Initialize this repository' section has a sub-header 'Skip this step if you're re' and three checkboxes: 'Add a README file' (checked, highlighted with a red box), 'Add .gitignore' (unchecked), and 'Choose a license' (unchecked). At the bottom, it says 'This will set' followed by a button with a branch icon and the text 'master'.

Create repository

You should now have a new repository called **lab-agile-planning**. It should look similar to the screenshot below:

This repository contains the lab for agile

Exercise 3: Setting up a Kanban board for "lab-agile-planning" repository

In this exercise, you will learn how to set up a Kanban board using GitHub **Projects** for the "lab-agile-planning" repository.

1. Navigate to the **lab-agile-planning** repository on GitHub, which you created in Exercise 2.
2. Once you are in the repository page, click on the **Projects** tab, as shown in the below screenshot.

3. Next to the **Link project** button, click the dropdown menu and choose **New Project**.

Welcome to the all-new projects

Built like a spreadsheet, project tables give you a live canvas to filter, sort, and group issues and pull requests. Tailor them to your needs with custom fields and saved views.

Team planning • GitHub

Manage your team's work items, plan upcoming cycles, and understand team capacity

Kanban • GitHub

Visualize the status of your project and limit work in progress

5. Name your project as **Lab Agile Planning** and proceed by clicking on **Create project** button.

← Create project

Kanban • GitHub

Visualize the status of your project and limit work in progress

Project name

Lab Agile Planning

6. On the project Kanban board, you'll have columns to represent different stages of your workflow such as "Backlog", "Ready", "In Progress", "In review", and "Done." You can add custom columns based on your workflow requirements.

This is ready to be picked up

+ Add item

7. To customize or modify the column name, click on the three dots and then select `Edit details`.

about:blank

17/23

8. When you click on `Edit details`, a popup will appear, as shown in the screenshot below. Enter the required column name into the highlighted text box. You can add an appropriate description or choose to remove it, then click `Save` to confirm the changes.

9. Similarly, let's rename the remaining columns as follows:

- Rename the **Ready** column to **Icebox**.
- Leave the **In progress** column as it is.
- Rename the **In review** column to **Review/QA**.
- Leave the **Done** column as it is.

After making the above changes, your Kanban board will look like this:

10. To Add a new column, navigate to the end of the existing columns and click on the + button. Then, select New column from the options. Enter the column name as **Product Backlog** into the Label text field, and finally, click Save to apply the changes.

11. To set the correct sequence for the Kanban board, drag the **Product Backlog** column and drop it before the **In Progress** column. The arrow in the screenshot below indicates from where you need to drag and drop the column.

The screenshot shows a Jira Agile board for a project named 'Lab Agile Planning'. The board is currently in 'Backlog' view, but the 'In progress' and 'Review/QA' columns are visible. The 'In progress' column has a count of 0/3 and the 'Review/QA' column has a count of 0/5. A red arrow points from the 'Review/QA' column to the 'In progress' column, indicating a transition. The board also includes a filter bar at the top and a '+ Add item' button at the bottom of each column.

12. Similarly, create the **Sprint Backlogs** column, and then rearrange it to resemble the Kanban board shown below.

Summary

Congratulations! You've set up your GitHub account, repository, and Kanban board, which you will be using in the upcoming labs.
